

Flora

Strengths

Excellent gustatory quality
Protected Designation of Origin (PDO)
process underway

Grains

● Cotyledons	Light green
● Tegument color	Ocher brown
● Shape	Mid-round
● TGW	Small

Agronomic characteristics

Earliness	Mid-early
Height	Quite tall

Crop management

Lentils have low pedo-climatic requirements.
Lentil is easy to grow and an excellent break crop.

Sowing

Density:

350 gr/m², so around 100 kg/ha. In altitude and late sowing, increase sowing density by 10 to 20%.

Sowing date:

15th of April - plain areas

15th of April to 15th of May - altitude areas

Give priority to good and surficial soils, avoid too clayed soils.

Flora is grown on the volcanic soils of La Planèze, giving its characteristic taste.

TGW: Thousand Grain Weight
